## Step 1

Install module **Incomaker** for **Magento2** using standard procedure with **Composer**:

```
composer require incomaker/magento2
bin/magento setup:upgrade
bin/magento setup:di:compile
bin/magento cache:flush
```

(you must be in folder where Magento is installed for this to work)

Step 2

Log into you administrator account, open **Stores** section and select **Configuration**:

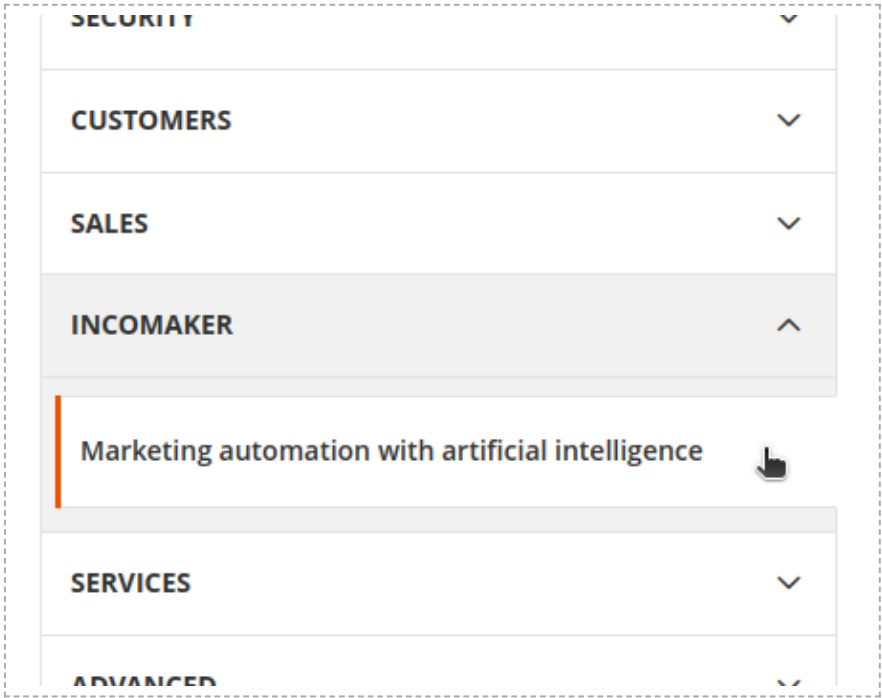

Step 3

In upper left corner of the screen, select configuration scope **Main Website**, alternatively select a specific website if you are running a multi-site installation:

Step 4

Expand item **Incomaker**:

Step 5

To connect with Incomaker, fill in value of **API Key**:

How to Obtain an API Key

You will get value of your **API Key** in your Incomaker account after clicking Eshop info.

Open my.incomaker.com

In upper right corner click on **Eshop info**
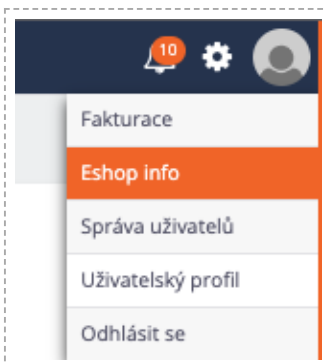

Copy value of field labeled as **API key**

Paste the value into Magento and save. If you entered correct value, **Account ID** and **Plugin ID** will be filled automatically.

Incomaker and Magento accounts are now connected and automatic data synchronization will follow.
